

PRODUCT IDENTIFICATION & BRAND PROTECTION IN LIFE SCIENCES

Safeguarding Patients, Protecting your Brand

Product marking has long been recognised as the front line of defence for patients, protecting them from potential safety issues and latterly, the scourge of falsified and counterfeit medicines.

For nearly forty years Domino has worked to build a portfolio that responds to the exacting requirements of this highly-regulated sector, working with customers, trade bodies and legislators around the world. We are eminently qualified to provide counsel for our Life Sciences, Health- and Personal Care customers as they address legislative and market demands for increased accountability and traceability in the supply chain.

Product Identification at the Heart of Manufacturing

While all Life Sciences manufacturers face similar legislative challenges, production models vary enormously: priorities in generics packaging are inevitably different from those in the branded sector and a tablet packaging line has little in common with creams or liquids manufacturing.

Domino's range of solutions for Life Sciences manufacturers is unparalleled, encompassing primary, secondary and tertiary coding for all materials to guarantee high quality coding throughout the supply chain to the point of sale or dispensing. From off-line coding to high speed cartoning across multiple lines, Domino technology produces crisp, clear and durable results on both human- and machine-readable code formats.

The new era of serialisation demands all this and more: printers must be able to communicate at high speed to download, process,

apply and record multiple unique codes per second in a fully validated environment.

An increasing number of customers are turning to Domino for their serialisation projects, recognising that through our experience in other sectors, we are uniquely placed to deliver on all these counts.

We are the supplier of choice for many of the leading machinery manufacturers in the sector, thanks to our Partner Programme, which provides OEMs with the training and resources they need to support third party installations.

Domino responds to the trust placed in us by our Life Sciences customers with constant innovation that adds value to your coding operations – now and in the future. From performance-charged marking technology for high-speed serialisation to the most durable inks on record, we recognise that the only guarantee of successful coding is a truly holistic approach.

Partnering with Domino delivers much more than coding: it means productivity, compliance and confidence – without compromise.

Leading the Way With Innovation and Knowledge

The range of products coded by Domino printers is truly astonishing. From packs in our fridges, store cupboards and medicine cabinets to components in the buildings we live and work in and the cars we drive – there's a good chance that a discreet Domino code is there to guarantee safety and integrity.

One of the pioneers of industrial ink jet, Domino has learned over almost forty years in the business that while the end result is a code, the priorities and practices of the many industries we serve are very different.

Our sector specialists – many of them recognised internationally for their expertise – are predominantly home grown, having worked hard over long careers with Domino to nurture their knowledge and passion for the Life Sciences sector. From flexible contract packing

operations to high-speed dedicated lines, our team has a profound understanding of what makes your business tick.

Wherever in the world our customers are, so too is Domino. Whether through a Domino office or our extensive distributor network, you can be sure of consistent, expert advice and support.

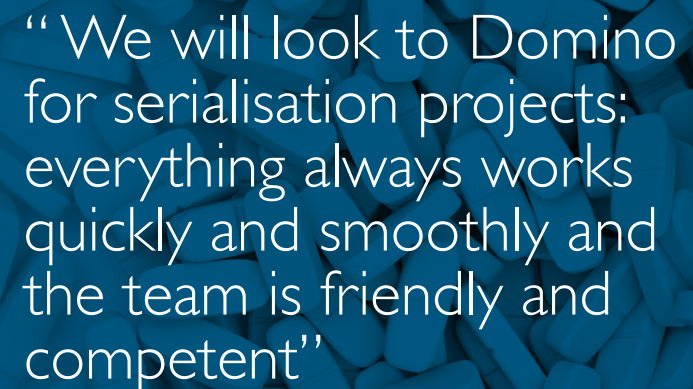

Domino doesn't just innovate – we re-invent. Our longstanding commitment to investment is evident in the many groundbreaking products that make up our range. That commitment also extends to investment in relationships with our customers to ensure a positive experience, from your first conversation with Domino through specification and product trials to installation and delivery.

We are a key player in the Life Sciences sector ecosystem, working with equipment manufacturers, industry and regulatory bodies to anticipate the challenges ahead and respond proactively. Domino is relentless in our mission to deliver printers and serialisation solutions tailored to your products and your business.

Case study

When Engelhard Arzneimittel needed to update its coding equipment it turned to Domino as the natural choice. A G120i thermal ink jet (TIJ) printer is now in place for coding on Prospan® Cough Liquid labels; subsequently a Domino M-Series was installed downstream to print and apply labels to outer cases.

The ease of use and flawless performance of these systems prompted Engelhard Arzneimittel to work with Domino on a project for direct coding onto PE bottles. Customer orders can now be actioned swiftly, thanks to the installation of a G230i. Domino's ethanol-based BK118 provides uniform, permanently readable codes with pin-sharp characters and high contrast.

“We will look to Domino for serialisation projects: everything always works quickly and smoothly and the team is friendly and competent”

Delivering Productivity in the Long Term

With Domino, installation is only the beginning. The flexibility, reliability and longevity of your coding systems are as important to us as they are to you.

We undertake to support your product throughout its life cycle with aftercare and consumables packages specified by you. Simple to operate, Domino printers are designed for a long and trouble-free

life but in the event that you do need our help, we provide a choice of online tools, telephone support and remote diagnostics to help resolve issues promptly. When an engineer is required, our qualified team will ensure you're up and running again just as soon as possible – your production is our priority.

Modular architecture allows your printer's hardware and software to evolve with your production needs to guarantee a long service life. And when the time to upgrade finally arrives, you can be sure that Domino will be on hand to ensure a seamless transition to the latest high performance technology.

About Domino

Domino is the leading business within Domino Printing Sciences. Founded in 1978, the company has established a global reputation for the development and manufacture of coding, marking and printing technologies, as well as its worldwide aftermarket products and customer services. Today, Domino offers one of the most comprehensive portfolios of complete end to end coding solutions spanning primary, secondary and tertiary applications designed to satisfy the compliance and productivity requirements of manufacturers.

Domino employs 2,600 people worldwide and sells to more than 120 countries through a global network of 25 subsidiary offices and more than 200 distributors. Domino's manufacturing facilities are situated in China, Germany, India, Sweden, Switzerland, UK and USA.
