intrex

Intrex labelling system for high-speed bottling line in Sulewski Brewery.

- The Intrex SET 2091 PLUS labelling system.
- Wrap-around beer bottle labelling with thermal transfer overprinting.
- High-speed. Up to 6,000 beer bottles labelled per hour.

MAIN GOALS:

Initially, the goal was to provide a labelling and marking system for the new production line in a brewery. Previously, all work was done in several steps, it required the work of many people and a few different smaller machines. Now the process is fully automatic. From design to execution, we have installed a reliable device that combines high-speed bottle labelling with the ability to print on the label, designed for a continuous work cycle. As a result, it improved several processes at once and increased production workflow. This allowed the customer to switch from manual or semi-automatic craft beer manufacturing to a medium size brewery and market production on a bigger scale.

ABOUT THE SULEWSKI BREWERY

BEER CREATED WITH PASSION

Browar Sulewski was founded in 2010, in the old military casino building. Starting from a small family brewery with a restaurant and pub, 6 types of beer are produced today. One of the owners – Mr Tomasz Sulewski drew his knowledge of brewing beer in Bavaria itself, where he trained among the world's best brewers.

SUCCESS MEANS NEW PRODUCTION LINE

Passion combined with hard work resulted in big success of the Sulewski family beers. Building a new brewery was dedicated to meet with higher customer demands but also to create new types of beer. Craft beer is not only about unique taste but it is also about creating interesting brand for customers with attractive packaging and label.
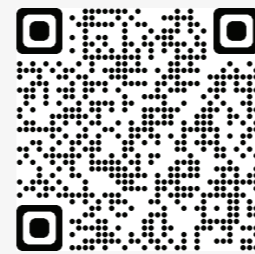

intrex

Intrex labelling system for high-speed bottling line in Sulewski Brewery.

MAIN FEATURES:

High capacity – up to 100 products/minute

Rotary transport module – ensuring stability and repeatability

Intrex SMART Panel – intuitive control panel, that allows you to operate all machine functions and the entire labeling process in one place

Quality – Legible and durable print on the label

QUALITY AND FLEXIBILITY – KEY SUCCESS FACTORS

We have designed and implemented a system precisely tailored to the needs of the new production line. The Intrex SET 2091 PLUS labelling system is a device based on a rotary star module, labeling with a capacity of up to 6,000 products per hour, while maintaining stability and repeatability of the application. The Domino V120i thermal transfer printer, despite its small dimensions, enables the content of labels to be completed with variable data, such as: production date and batch number.
